

WSO2con 2026 AI Developer Day

Wednesday, May 20, 2026

Hyatt Regency Austin | TX

Skip the slides. Spend the day building.

AI Developer Day is a full day of hands-on labs where you work directly with WSO2 engineers and architects. No keynotes, no panels. Just guided, practical sessions across APIs, integration, AI agents, identity, and developer platforms.

It's the fastest way to go from curious to capable.

WHAT YOU'LL BUILD:

API, AI, and MCP Management: Prepare your APIs for agentic consumption with MCP, and learn how to lock down AI traffic with PII masking, prompt guardrails, data sovereignty controls, and more.

Integration: Go from low-code to pro-code and everywhere in between. Then, level up by building enterprise-grade integration agents from scratch.

AI and Agentic Systems: Four sessions dedicated to building, managing, and governing AI agents at enterprise scale. From your first agent to a full Agent Manager deployment, this track alone is worth the trip.

Internal Developer Platform: Spin up your own developer platform with OpenChoreo, and discover how AI is transforming the entire software delivery lifecycle.

Identity and Access Management: Secure everything from consumer auth to AI agent identities and learn what it takes to lock down agentic B2B applications.

Your spot. Your price.

AI Developer Day – USD 99

*Standard pricing for the 3-day conference – USD 699
